forming a first and second orientation films on the first and second substrates,
respectively;

forming a seal material at edges of the first substrate;

assembling the first and second substrates with each other;

performing a first pressurizing and heating process on the first and second substrates to
form a first cell gap;

injecting a liquid crystal material into the first cell gap;

performing second pressurizing and heating process on the first and second substrates to
form a second cell gap, wherein the second cell gap is narrower than the first cell gap; and

sealing the second cell gap.

7. A method of fabricating a liquid crystal display panel having first and second substrates,
the method comprising the steps of:

assembling the first substrate with the second substrate;

performing a first pressurizing and heating process on the assembled substrates to have a
first cell gap;

injecting a liquid crystal material into the first cell gap;

performing second pressurizing and heating process on the substrates to have a second
cell gap, wherein the second cell gap is narrower than the first cell gap;

sealing the second cell gap; and

cutting the sealed panel into a unit cell.
